Subj: Evacuation of Rongelap and Ailinginae Atolls on 5 March 1954;  
 report of

Ref: (a) COMDTAGROUP 7.3 Disp 00004E of March 1954  
 (b) CH JTF SEVEN Disp 00122E of March 1954

Enclo: (1) Passenger lists of evacs from Rongelap and Ailinginae  
 Atolls  
 (2) Radiological statistics reported by monitor teams, Rongelap  
 and Ailinginae Atolls  
 (3) Location of water cisterns, Rongelap Island

1. In compliance with reference (a), the PHILIP got underway from Bikini at 2145Z on 2 March and arrived and anchored off Rongelap Island in the lagoon at 0730Z on 3 March. A RH-5A (VP 29) aircraft, No. 2005, piloted by LCDR WELCH which previously had been dispatched from Kwajalein anchored about 100 yards off the beach of the said island shortly before the PHILIP anchored. Prior to anchoring, the PHILIP, in good radio communication with the PHILIP, made a thorough reconnaissance flight around the atoll. Also on departure the previous evening, the Commanding Officer of the TC 1546 offered much valuable navigational and general information which was of great help to the PHILIP.

2. The beach party including the Commanding Officer, Executive Officer, Radiological Safety Officer and a three man monitoring team proceeded from the PHILIP in a motor whale-boat to the PHILIP and picked up Mr. Marion WILDS, civilian representative of the Civil Administration Unit, Marshall Islands Trust Territories of Pacific Islands, and Oscar DELIMA, Marshallese interpreter. The beach was such as to allow an easy close-in landing without danger to the boat.

3. The party was met at the beach by John, the Magistrate of Rongelap. Monitoring of the island commenced immediately. On the basis of initial readings it appeared obvious that evacuation was definitely in order. The Commanding Officer, U.S.S. PHILIP presented Mr. Wilds with the general picture based on monitoring information, and on being informed that Commander Joint Task Force 501 had stated that the actual evacuation should be requested by trust territory officials, Mr. Wilds was very apathetic regarding the need for evacuation. Through the interpreter

it was explained that it was to the best interests of the Rongelap people to leave the atoll and that the PHILLIP was there for that purpose. Mr. Wilds was present during all the conversation with John the Magistrate and was of much assistance as also was LCDR V. L. MARTHA, Executive Officer of the PHILLIP whose Majuro Island Government background proved very helpful in convincing the Marshallese that they should leave.

4. The information that the people would leave Rongelap was passed very quickly. Each person was asked to bring a small handbag as the only baggage since the monitors readings indicated a high dosage on sleeping mats, palm baskets, and other personal belongings. It is considered very important that once the accepted leader is established and identified that all requests be made through him without exception. This procedure expedited the entire operation.

5. It was decided to utilize the PHILLIP to transport the elderly and the sick to Enewetak. John designated sixteen (16) persons and this party was embarked in the aircraft in about an hour and a half after the party first landed. Those passengers are listed in Enclosure (1) which is forwarded herewith.

6. Fortunately, the Marshallese were not reluctant to leave the island. The Magistrate explained that the people had been sick and he obviously deduced that all of the people would soon be provided the necessary medical care. John was apprehensive about the safety of his boat, a 50 foot sloop. The sloop was towed by the ship's whale boat to a better lee. Two anchors were dropped and the boat appeared to be in good holding ground.

7. The forty eight (48) remaining Marshallese were transported via two ship's whale boats to the PHILLIP. Names of evacuees are listed in enclosure (1).

8. De-contamination of the Marshallese commenced immediately upon embarkation. Routes had been previously established and the de-contamination teams on station ready to guide the passengers to the de-contamination center (after crew's washroom). Clothing was placed in two C.I. cans aft and after a thorough shower clean clothes were readily available at the exit. The crew donated sufficient white and dungaree trousers, dungaree and "T" shirts without which the de-contamination could not have been as effective.

9. Women and children were billeted in the torpedo room and the men provided temporary shelter under a canvas tarpaulin rigged on the GI level between the stacks. Cots were available as seats in both locations. The after officer's head and washroom, a short distance from the torpedo room was designated for use by the women and children. The men had the use of the after crew's head and washroom. The separation of the Marshallers was mandatory due to the limited space available in the torpedo room. A continuous 24 hour sentry watch, all petty officers, was set at both locations to insure privacy and to assist in any requests made by the Marshallers.

10. All children were provided milk shortly after de-contamination. The Marshallers went through the regular mess line for meals and had the same ration as the crew. The meat course was the least popular. The majority of the party asked for more soup, bread and vegetables. Hot soup was most in demand. Ice cream was the natural favorite of all the children.

11. The contaminated clothing was washed in the ship's laundry with a strong soap solution, dried, pressed and returned within four hours after the party embarked.

12. Sleeping accommodations, although crowded, were considered adequate. Twelve (12) cots and two (2) stretchers were set up in the torpedo room and the remaining deck space covered with kapok life jackets. The men slept on the fantail under the deck swing. Life jackets proved to be comfortable pallets and are excellent insulation against warm or damp decks. With the above arrangements each person had a sleeping space.

13. The P.I. plane Commander reported that he thought he saw some people on Eniatok Island (Fongelap Atoll). A party, including John and Oscar Delrai, the interpreter, landed on this island at 0512451. A thorough search was made but no Marshallers were located. The Magistrate insured the search party that he was certain that there were no persons there since a boat was not nearby. Monitor team readings indicated an average of 5.02 Roentgens, with a maximum reading of 8.65 Roentgens. Monitor team statistics are included in enclosure (2). It was lucky that this island was not inhabited.

14. Six (6) samples of water taken from wells on Rongelap have been forwarded in compliance with reference (b). Approximate locations of wells are indicated in enclosure (5).

15. The ship then proceeded to Ailinginae Atoll. The Magistrate believed it possible that a party was on Enibuk Island. A party was landed, conducted a thorough search but found no one. The ship remained in the vicinity of Enibuk while the two whale boats proceeded to Sifo Island. A sloop was sighted anchored in the lagoon off Sifo Island. The party landed and John the Magistrate once again explained the need for leaving Rongelap. Eighteen (18) Marshallese were transported from this island. Both this group, and John, assured the party that there were no Marshallese on any of the other islands and the evacuation was considered completed. The sloop was anchored off the island in a good lee. The same procedures for handling the 18 evacuees from Sifo were followed as described in the preceding paragraphs.

16. The PHILIP departed from Ailinginae at 1800H on 3 March and arrived at the Naval Station Kwajalein at 0630H on 4 March. The Marshallese were disembarked during the morning of 4 March and removed to the Naval Dispensary. On arrival, the PHILIP was visited by Commander, Naval Station, Kwajalein, and representatives of Commander Joint Task Force SEVEN.

17. In spite of the willingness of the people to leave their homes there was understandable concern over the safety of the two sloops left behind at Rongelap and Sifo. These boats are a community asset for hauling copra and returning the basic food staples, medicines and clothing during the period that Trust Territory field trip ships are not available. There was a considerable amount of copra in a drying shed on Eniwetok and a smaller amount on Sifo. It was most disheartening to the Magistrate to leave the copra behind since he himself had prepared the copra on Eniwetok last week. All livestock, including about one hundred chickens and ten pigs were abandoned on Rongelap. Two dogs were also left on the island. Since the people were not given an estimate of the duration of their evacuation, the concern over the above items will no doubt increase as the absence from their homes grows longer.

18. It is recommended that aircraft periodically check the condition of the two sloops at Rongelap and Sifo. It is further recommended that some consideration be given to the transfer of livestock, copra and personal belongings on Rongelap, Sifo, Eniwetok. There is a possibility that these animals could be of much value for scientific research.

19. The Marshallese were excellent passengers, most cooperative, never demanding and exemplary in conduct. It was a distinct pleasure for the crew of the PHILIP to have been afforded the opportunity to assist these quiet people in the evacuation.

## II. DECONTAMINATION: (PERSONNEL)

1. Decontamination readings are as follows:

## Average Readings

ISLAND	Before Decontamination	After Decontamination
Rongelap	60 R/Hr	25 R/Hr
Siffo	40 R/Hr	25 R/Hr

NOTE #1. Clothing was slightly contaminated even after decontaminating procedures were employed due to its rough surface and prolonged exposure to radiation. However, maximum readings of less than 50 R/Hr did not warrant discarding men's clothing due to the short time it was to be worn.

NOTE #2. Decontamination upon leaving the ship: 20-22 R/Hr.
