412072

Dear Mr. President:

This is to report that the Atomic Energy Consission has reviewed the documentary report film covering Operation IVI and has deleted from it the more highly sensitive portions, in conformity with your recent instructions to me. The resulting film retains a classification of Secret - Restricted Lata, and with the deletions we have made, we believe the picture is now suitable for showing to responsible persons who have a need to know the general story of our progress toward the development of a very high-yield weapon but who do not need to know the details of that weapon's construction or operation.

R

The story contained in our Secret version of the film tells that us have successfully detonated an experimental device of about ten to twelve megatons yield using a form of liquified hydrogen as fuel. The story also indicates that much further work is necessary before the size, weight, and complexity can be reduced to the point where the device can be made into a deliverable weapon.

DECREE 5650 28 0 10/4/4/

Though some portions of the revised film are still highly classified information, searching review of the presentation has convinced us that the sensitive matter pertaining to weapon design details has been removed. This film is now available here for showing to any groups you may direct to see it. We feel that it should be shown as soon as possible to the Joint Congressional Committee on Atomic Energy, and unless you have objection, we will make arrangements to do so.

Respectfully yours,

6: 8 charged W. 2 - 483/42
